GLOSSARY OF ENVELOPE TERMS

BASIC ENVELOPE SIZES (mm)

BESPOKE

custom made envelopes to meet specific customer needs and specifications; not from stock

BOARD BACK ENVELOPES

generally a pocket envelope made with a cardboard back & paper front; often printed with "Please do not bend"

BUBBLE BAGS

envelopes lined with bubble cushioning material to provide product protection

COMMERCIAL ENVELOPES

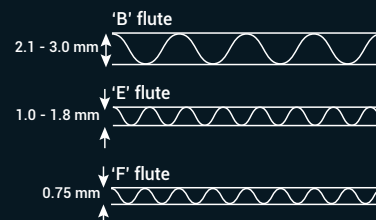

general term for the most common style of business envelope for business, direct mail and personal correspondence

CORRUGATED CARDBOARD

shaped into a series of parallel ridges and grooves so as to give added rigidity and strength

FLUTE

structure of the wave shaped cardboard material combined with flat liners that makes up a board. There are several various flute forms and combinations with different flute thickness and number of flutes per linear foot.

FLAP TYPES / SHAPES

FULL VIEW

a full view envelope has an extra large window designed to give maximum exposure to the contents. Especially valuable for attracting attention and enhancing response to direct mail advertising.

GLASSINE ENVELOPES

made of transparent, smooth and glossy paper with wax paper-like finish that is air, water and grease resistant. For its acid-free, anti-static and pH neutral qualities they are mostly used for storing stamps, or photographs.

GREETINGS CARD ENVELOPES

a large range of white or coloured envelopes with wide variety of shapes and formats to suit all popular greetings card sizes. Ideal for card and craft manufacturers to enhance greeting cards, invitations, and letters.

GSM - see MATERIAL WEIGHT

weight in Grammes per Square Metre

GUSSET ENVELOPES

envelopes with expandable sides for extra capacity. They have been created to hold larger, bulkier items such as catalogues.

HAMMER FINISH

features an embossed textured effect creating a marbled looking finish

KRAFT PAPER

is a porous paper with high elasticity and high tear resistance, designed for packaging products with high demands for strength and durability. Kraft papers have a coarser finish than woves thanks to the long fibres giving the paper its strength.

LAID FINISH

very classy finish, that simulates the look and feel of handmade paper. Its texture is made up of imprinted evenly-spaced parallel lines also known as "combe lines."

LINED ENVELOPES

envelope interior decorated with different paper to the rest of envelope (e.g. tissue paper, decorative foil)

MAILING / MACHINABLE ENVELOPES

envelopes configured for using on machines that automatically insert the contents

MATERIAL WEIGHT / GSM

how many grammes a single sheet of material measuring 1m x 1m weighs

MICRONS / THICKNESS

or mcs (μm) measure the thickness of the paper or card in microns

OPAQUE

the interior security wash printed inside an envelope that allows the contents not to be viewed from outside and so adding extra security

POCKET

envelope with the opening flap on the short edge

POUCHETTE ENVELOPE

also known as petal fold envelopes. They feature 4 round petals that wrap around a card or cards in multiple ways and interlock like the petals of a flower for a stylish, organized invitation.

RIPPA STRIP / TEAR TAPE

a self-adhesive tear tape, which gives fast, safe and immediate access to the contents of packaging

SEAL TYPES

-GRIP SEAL / ZIP SEAL

a type of self-sealing packaging which generally have two plastic ridges near the top that click shut together. Also know as resealable bags they offer a perfect packaging solution for securing content and avoiding leakage or contamination.

-GUMMED

to seal the envelope an adhesive strip needs to be activated by application of moisture

-PEEL AND SEAL (P & S)

type of pressure sensitive adhesive applied to the flap and covered with a removable protective waxed strip until the envelope is ready to be sealed

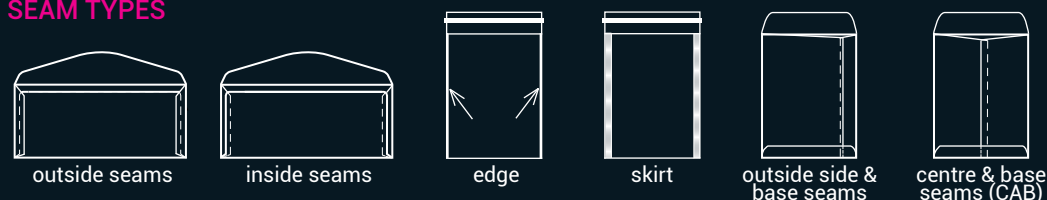

-SELF-SEAL / PRESS SEAL (S/S)

pressure sensitive adhesive applied to top and bottom flap. Envelope is sealed by pressing both flaps together.

-STRING AND WASHER

mechanical closure with one washer (or eyelet) attached to the flap and one to the body of the envelope. A piece of string is affixed to the top washer and goes around both washers to close the flap.

SEAM TYPES

OUTSIDE SEAMS - side flaps are folded OVER the back flap for clear insertion; very common for mailing envelopes

INSIDE SEAMS - side flaps are folded UNDER the back flap for clear insertion

TYVEK® DuPont™ ENVELOPES

DuPont™ Tyvek® are high-performance protection envelopes made from DuPont™ Tyvek® brand strong and durable material. Tyvek® is puncture-, tear-, and water-resistant, breathable, and inert so it easily withstands the most gruelling conditions. It's also extremely light weight and carbon footprint free.

THICKNESS - as MICRONS (μm)

TRANSLUCENT ENVELOPES

made from transparent paper to give a hint at the card or invitation inside. Excellent for an eye-catching finish to your mailings and get people curious.

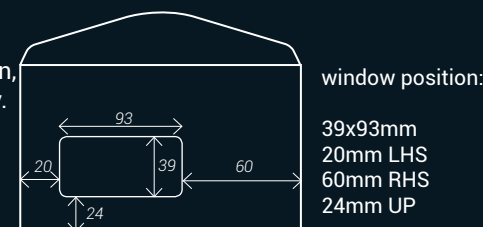

WALLET

envelope with the opening flap on the long edge

WINDOW POSITIONING

window envelopes have a clear area on the front to allow the address from inside the letter to be seen, this is to save writing out every address individually.

Position of the window on an envelope is usually measured looking at the envelope with the flap at the top, unless position of the flap is specified.

The window position is measured up from the bottom (UP) and from the left hand side (LHS) or the right hand side (RHS). The first dimension of a window size is the window height.

WOVE FINISH

paper having uniform surface and no discernible marks. Soft, smooth finish. Most widely used envelope paper. Available in white or colours.

CLARIANA COLOURED ENVELOPES

Produced from *Eucalyptus* fibres from sustainable forests plus ground calcium carbonate.

All components used are environmentally friendly, and the lightfast dyes used are compatible with food use.

Thanks to its properties, *Eucalyptus globulus* is regarded by experts around the world as providing the ideal fibre for printing and writing paper.

The wood is made up of short fibres presenting extremely consistent properties: excellent softness, opacity, bulk, rigidity, dimensional stability and wet strength.

BESPOKE PRODUCTS

At Envelopes Limited we can manufacture envelopes to virtually any specification, be it flexo or litho, conversions or pre-press finishing we can make your envelopes and postal packaging.

Our sector experience can mean we can produce envelopes/postal packaging from:

- 70 gsm – 600 gsm paper or board (coated or uncoated stock)
- OPP / CPP / LDPE cello / poly bags
- Corrugated (normal or micro flute)
- Poly / paper / matt / metallic bubble bags

BESPOKE ENVELOPE OVERPRINT

At Envelopes Limited we have dedicated envelope overprint presses ranging from single colour to four colours. With the installation of our UV drying unit we can overprint on coated stock.

Halm two colour envelope over print press x 3
Halm four colour envelope over print press x 1

Our kit enables us to over print:

- up to 180 gsm in 4 colours
- up to 600 gsm in 2 colours
- gussets in up 2 colours

We can now also digitally print envelopes, packaging and bubble bags in 4 colours.
Large mail out? Flexo reel fed printed bespoke envelopes are great for large mailing jobs.
(the envelopes are printed inline at the time the envelopes are manufactured)
